

Inundation hazard map for Osaka City

River Flooding (in case of levee breach)

Calculation Conditions for Rain and Tsunami Scenarios

Disaster	River	Scenario conditions	Released	Contact Information	Telephone number
River flooding	① Yodogawa River	24-hour total rainfall: 360 mm/hour	Probable maximum precipitation (Likelihood: about 1/1,000 years)	Jun. 2017	Yodogawa River Office, Kinki Regional Development Bureau, MLIT 072-843-2861
	② Yamato River	12-hour total rainfall: 316 mm/hour	Probable maximum precipitation (Likelihood: about 1/1,000 years)	May 2016	Yamatogawa River Office, Kinki Regional Development Bureau, MLIT 072-971-1381
	Higashiyoko and Nishiyoko Rivers	24-hour total rainfall: 904.1 mm/hour Maximum rainfall: 102.5 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Nov. 2019	Tondabayashi Civil Engineering Office, Osaka Prefecture 0721-25-1131
	Ishikawa River	24-hour total rainfall: 724 mm/hour Maximum rainfall: 195.5 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Jan. 2021	Nishiohara Civil Engineering Office, Osaka Prefecture 06-6541-7771
River flooding	③ Kanzaki River	24-hour total rainfall: 737 mm/hour Maximum rainfall: 81.1 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Jan. 2020	Nishi Osaka Flood Control Office, Osaka Prefecture 06-6541-7771
	Tenjiku River	24-hour total rainfall: 150 mm/hour Maximum rainfall: 142.6 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Jan. 2020	Ikeeda Civil Engineering Office, Osaka Prefecture 072-752-4111
	Taka River	24-hour total rainfall: 150 mm/hour Maximum rainfall: 145.4 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Jan. 2020	Ikeeda Civil Engineering Office, Osaka Prefecture 072-752-4111 072-627-1121
	Ai River	24-hour total rainfall: 776 mm/hour Maximum rainfall: 189 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Mar. 2020	Ibaraki Civil Engineering Office, Osaka Prefecture 072-627-1121
High tide	④ Neyagawa, Daini-Neyagawa, and Hirano Rivers, Hirayagawa-bunshiro Channel, Furukawa River	24-hour total rainfall: 683 mm/hour Maximum rainfall: 138.1 mm/hour	Probable maximum precipitation (Likelihood: 1 more than 1,000 years)	Mar. 2019	Neyagawa River Basin Flood Control Office, Osaka Prefecture 06-6962-7661
	⑤ High tide	Scenario in which the central pressure is 910 hPa (Muroto Typhoon level), radius of maximum cyclogenetic wind speed is 75 km (Isewan Typhoon level), traveling speed is 73 km/h, and the path is the same as that of Muroto Typhoon		Aug. 2020	Person in charge of emergency management, Port & Harbor Bureau, Osaka City 0725-21-7246
Inland flooding	⑥ Inland flooding	24-hour total rainfall: 549 mm/hour Maximum rainfall: 147 mm/hour	Probable maximum precipitation (Likelihood: about 1/1,000 years)	Mar. 2021	Coordination Section, Sewer Department, Public Works Bureau, Osaka City 06-6615-7594
Tsunami	⑦ Nankai and Nankai earthquake and tsunami	Scenario in which an earthquake with a magnitude of around 8.6 occurs, causing flooding due to a tsunami, and tide gates (those open at night), etc. did not close (high tide assumed)		Mar. 2004	Planning Section, Port & Harbor Bureau, Osaka City 06-6615-7782
	⑧ Nankai Trough mega earthquake and tsunami	Scenario in which an earthquake with a magnitude of around 9.1 occurs, causing flooding due to a maximum class tsunami (breakwater and opening/closing of tidal barriers taken into account) (high tide assumed)		Aug. 2013	Disaster Prevention Planning Division, Office of Emergency Management, Osaka Prefecture 06-6944-6487

Transmission of information

Receiving Information

Bosai Information Mail Creates the city's disaster measures information and information needed in times of disaster to your registered mobile phone or PC e-mail address
Must preregister toukou@osaka-bosai.net
Send a blank e-mail to the e-mail address above to register. The e-mail address can also be read from the 2D code on the right.

Emergency Warning E-mail Emergency information will be sent to mobile phones that support emergency alert emails.
Check in advance to see if you can receive it You may need to change your settings. Please ask your mobile phone provider for more information.

Yahoo! disaster prevention bulletin app It provides evacuation and earthquake information via push notifications.
When setting the region, enter XX Ward, Osaka City. Then you can receive information for the entire area of Osaka City.

Finding Information

- If outdoor emergency speaker broadcasts could not be heard: call the Government Disaster Wireless Telephone Service (06-6210-3899), charges apply.
- In times of disaster, switch your TV to NHK and press the "I" button for data broadcasting to view evacuation advisories, if evacuation shelters are open, and other information.

¹ Disaster Emergency Message Boards become available when a major disaster occurs. For service details, please see the explanation provided by NTT and the respective mobile phone companies.

What is My Timeline?

My Timeline provides an opportunity to prepare for wind and flood disasters, such as heavy rains and typhoons, and plan in advance how to escape using your own evacuation route while giving due consideration to the circumstances or evacuation behavior of each family member. Creating a schedule that summarizes who does what and when will help you act in an appropriate manner in the event of an emergency.

Family Evacuation Plan

When heavy rain could cause river flooding

1

Evacuation place

Determine where you will evacuate to and write it down.
Determine all ① to ③ evacuation places that you will evacuate to depending on the situation.

2

Plan what to do until you start evacuating.

Collect information
☐ Check weather and evacuation information
Prepare for evacuation
☐ Check emergency kit and stockpile
☐ Buy necessary items
☐ Begin moving household items to 2F, etc.
☐ Inspect area around the house
☐ Put away items that may blow away
☐ Check window locks
☐ Charge mobile phone
☐ Check opening of evacuation shelter
Contact and call out
☐ Call out to neighbors
☐ To evacuate ☐ To evacuate together
Name
Contact
☐ To evacuate ☐ To evacuate together
Name
Contact
☐ Communicate with family (If you're not together)
☐ Contact the person who will assist your evacuation (If you cannot evacuate by yourself)
Miscellaneous
☐
☐

3

Fill in when you will start evacuating and when you will do what.

Determine when you will take the actions you identified in ②.
Write down when you will evacuate.

Family Evacuation Plan

Heavy rain is forecasted

Warning Level 1
Early advisory information

Warning Level 2
Flood advisory
Heavy rain advisory

Warning Level 3
Evacuation of the elderly from a dangerous area

Warning Level 4
Evacuation of all people from a dangerous area

Warning Level 5
Ensuring safety during an emergency

High

Fill in When will you evacuate? When will you do what?

Ex: Double check emergency grab-and-go bag (mom)

Ex: Double check evacuation shelter (everyone)

Ex: Grandma and mom evacuate to a relative's house by car
Likely evacuation place at this stage
Evacuation place ①, ②

Ex: Evacuate to XX Elementary School (dad and children)
Likely evacuation place at this stage
Evacuation place ①, ②

Likely evacuation place at this stage
Evacuation place ③

* Depending on the situation of the disaster, information may not necessarily be released in this order.
It is important to respond flexibly to the situation.

After evacuating

Contact method

After evacuating, inform your family and other important people that you have evacuated safely

Family meeting place

It is extremely dangerous to leave or relocate from your evacuation place before the evacuation information is lifted.

Miyakojima Ward
Save

Protect Yourself from Flooding and Tsunami!

大阪市 Osaka City Flood Hazard Map English

How to Use this Hazard Map

How to Use 1

Check the disaster risks for your neighborhood

Use this hazard map to check risks, including which river will cause flooding and whether you will be affected by high tide in times of heavy rain or typhoon, and whether your area is subject to tsunami damage following an earthquake.

How to Use 2

Determine when and where to evacuate to for each type of disaster

Your evacuation actions to protect yourself will be different depending on the situation of the disaster and the situation you are in.
Determine when and where you will evacuate to for protecting yourself from each type of disaster: heavy rain; typhoon; and tsunami.

How to Use 3

Check your daily preparedness by making use of the information in here and My Timeline to protect yourself

A variety of information is released in times of disaster. Take daily preparedness measures by making use of the information in here which will facilitate immediate actions in an emergency, as well as My Timeline which you can fill out.

Evacuation and meeting place

Determine and write down the evacuation and meeting places by type of disaster.

What kinds of natural disasters happen in Osaka?

In Osaka, inundation is assumed by river administrators (Kinki Regional Development Bureau, Osaka Prefecture, and Osaka City) in the event of heavy rains or when a tsunami occurs because of an earthquake. Specifically, river flooding, inland flooding, tsunami inundation, and a high tide are assumed to occur.

River Flooding

Long-duration heavy rainfall events can lead to levee breaks and inundation due to increased river water.

Inland Flooding

If it rains heavily and the river level rises beyond the drainage capacity of a waterway or a sewer system, rainwater will overflow, submerging housing areas and roads.

Tsunami Inundation

Seismogenic faulting that has occurred in the seabed makes the seabed rise or fall, causing waves on the sea surface. The waves will then spread in every direction, forming a tsunami.
1. The seabed and sea level rise or fall due to an earthquake.
2. The sea level change produces big waves, which spread in all directions → Hit the shore.

High tide

A storm surge is a phenomenon where the sea level (tide level) becomes higher than the normal tide level due to the approach of a typhoon or low atmospheric pressure. The main cause of the abnormal rise in tide level are the low atmospheric pressure pulling water from the sea surface and a storm's winds pushing water onshore.

Typhoon and Low Atmospheric Pressure

High waves from the offing
Storm Surge
Normal tide level (normal low tide)
Blowing effect
Sucking effect

Warning Level 5

Disaster has occurred or urgent situation

Actions to Protect Yourself

Be on heightened alert, check evacuation actions, prepare for evacuation
For example:
● Stay alert of weather information
● Find an evacuation place on the hazard map
Begin evacuating to places that will not flood
For example:
● To a relative's home, friend's home, workplace, etc., including those not in Osaka City
Evacuate people requiring time to evacuate
Aged, the elderly
For example:
● To a safer place that will not flood (incl. 3F or higher), e.g., a relative's home, friend's home, workplace
● To your closest evacuation shelter
● Double check your emergency grab-and-go bag in preparation for Warning Level 4 (evacuate everyone)
Evacuate quickly to an evacuation site
For example:
● To a safer place that will not flood (incl. 3F or higher), e.g., a relative's home, friend's home, workplace
● To your closest evacuation shelter
● To a tall building or other elevated place
If you feel you are in danger on your way to an evacuation site, go to the nearest safe place
For example:
● To your closest evacuation shelter
● To your closest evacuation shelter (to a flood/tsunami evacuation building)
● To a tall building or other elevated place
It is very dangerous to evacuate in a flood. Your life is in danger. Immediately secure your safety!
For example:
● To your closest evacuation shelter
● To your closest evacuation shelter (to a flood/tsunami evacuation building)
● To a tall building or other elevated place
Issued by the city
Out of a dangerous area
The elderly, etc. should evacuate
Equivalent to Warning Level 3
Issued by MLIT, JMA, and the prefecture
Flood alert information, Flood warning, etc.
Issued by the prefecture
High tide flood danger information
Issued by the city to the extent possible
Ensuring safety during an emergency
Equivalent to Warning Level 5
Issued by MLIT, JMA, and the prefecture
Flood inundation information, Heavy rain emergency warning, etc.

How Will You Evacuate?

If you can stay at home due to shallow flooding, etc.

Do not go outside if it is unwise

Depending on the wind and rain situation, it may be safer to stay at home. Evacuate to a safe place in your home that will not flood.

If you cannot stay at home due to deep flooding, etc.

Evacuate early

Evacuate early to a place that is unlikely to flood. Your options may include evacuating to a relative's home, a friend's home, workplace, incl. outside Osaka City.

Evacuation Precautions

Go to a place higher than flood level

Driving or evacuating in strong wind is dangerous

The strength of the wind affects evacuation. When strong wind gusts are blowing due to a typhoon, etc., a traveling truck may flip over, or block walls and houses may begin to collapse.

Higher than flood level

* Depending on the situation of the river(s) and the disaster, information may not necessarily be released in this order.
It is necessary to respond flexibly to the situation.

When a tsunami strikes

How Will You Evacuate?

Move to an inundation-free place as soon as possible.

Upon feeling earthquake tremors or receiving a tsunami warning, evacuate to an inundation-free place as soon as possible.

● Outside the assumed flood inundation zone
● Safe, inundation-free floors of the nearest tsunami evacuation building
● Safe, inundation-free floors of the nearest tall building or on high places

Tsunami (higher than 1 m) caused by a massive Nankai Trough earthquake is expected to reach Osaka City within 110 minutes after the occurrence of the earthquake.

Tsunami Information

Estimated maximum tsunami height	Warning name	Your responses		
Quantitative expression (indication)	Qualitative expression			
Over 10 m				
10 m	5m-Height≤10m	Huge	Major tsunami warning (Emergency warning)	● As quickly and high as possible
5 m	3m-Height≤5m			
3 m	1m-Height≤3m	High	Tsunami warning	● If you did not escape in time, run and climb up a tall building or other elevated place
1 m	20cm≤Height≤1m	N/A	Tsunami advisory	● Stay alert of tsunami information

When heavy rain could cause river flooding

Disaster Information(Warning Level)

Warning Level 1

Warning Level 2

Warning Level 3

Warning Level 4

Warning Level 5

Disaster has occurred or urgent situation

Actions to Protect Yourself

Be on heightened alert
For example:
● Stay alert of weather information.
Check evacuation actions
For example:
● Double check evacuation route on the hazard map
● Stay alert of the rainfall situation in your area
Evacuate people requiring time to evacuate
Aged, the elderly
For example:
● To a safer place that will not flood (incl. 3F or higher), e.g., a relative's home, friend's home, workplace
● To your closest evacuation shelter
● Double check your emergency grab-and-go bag in preparation for Warning Level 4 (evacuate everyone)
Evacuate quickly to an evacuation site
For example:
● To a safer place that will not flood (incl. 3F or higher), e.g., a relative's home, friend's home, workplace
● To your closest evacuation shelter
If you feel you are in danger on your way to an evacuation site, go to the nearest safe place
For example:
● To your closest evacuation shelter
● To your closest evacuation shelter (to a flood/tsunami evacuation building)
● To a tall building or other elevated place
It is very dangerous to evacuate in a flood.
Your life is in danger. Immediately secure your safety!
For example:
● To your closest evacuation shelter
● To your closest evacuation shelter (to a flood/tsunami evacuation building)
● To a tall building or other elevated place

Evacuation Precautions

It is dangerous to go outside in torrential rain or to flooded areas

If the flood risk is high, do not go walk outside. Wait indoors.

As a rule, evacuate on foot

If you need to evacuate by car, begin evacuating earlier, e.g., the elderly and others requiring assistance.

Do not use flooded roads

The water will be muddy, and you will have a hard time seeing where you are going. It is dangerous as you can fall into a manhole, drain, or other openings.

Manhole

Danger

* Depending on the situation of the river(s) and the disaster, information may not necessarily be released in this order.
It is necessary to respond flexibly to the situation.

How Will You Evacuate?

If you can stay at home due to shallow flooding, low risk of house collapse, etc.

Do not go outside if it is unwise

Depending on the wind and rain situation, it may be safer to stay at home. Evacuate to a safe place in your home that will not flood.

If you cannot stay at home due to deep flooding, high risk of house collapse, etc.

Evacuate early

Evacuate early to a place that is unlikely to flood. Your options may include evacuating to a relative's home, a friend's home, or workplace.

About tsunami evacuation buildings

Image

Osaka City is working to secure tsunami evacuation buildings, which will serve as temporary or emergency facilities for protecting people's lives from river flooding and tsunami. Know where your closest tsunami evacuation buildings are in case of an emergency.
