

Flood Hazard Map for Nishinari Ward

In Nishinari Ward, inundation events due to flooding of the Yamato River, a storm surge, and inland flooding and tsunami inundation events due to a Tonankai earthquake, a Nankai earthquake, and a massive Nankai Trough earthquake are assumed to occur.

- Is the area where you live prone to inundation?
- Where is the nearest safe evacuation shelter?
- Are there any roads or underpasses that could be covered with water on the way to the evacuation shelter?

Using this map, check in advance where safe evacuation shelters (disaster shelters, etc.) are located and which evacuation route to take to ensure safe evacuation in the event of an emergency. In the event of a large-scale inundation, disaster shelters are expected to be crowded. If evacuation shelters are located far from your house, you should expect that it will take time for the elderly to evacuate. It is also important to secure more than one temporary shelter other than predesignated evacuation centers, such as securing condominium or other high buildings in the neighborhood by negotiating with owners in advance. Moreover, since it is dangerous to move out of your house during stormy weather, remaining in your house can be an alternative to evacuation as long as you have made appropriate disaster preparations at home.

Note:
When evacuating to a tsunami evacuation building, evacuate only after checking that it is located on a high place that will not be inundated.

Safety measures for your house

Reduce the likelihood of your house being inundated and your home contents damaged.
